ilon® Protect-Ointment

Medical Skin Care – for highly stressed skin. Cares for the skin and protects against pressure and chafing.

What is ilon Protect-Ointment and what is it used for?

ilon Protect-Ointment is a special ointment made from natural plant ingredients and is used for the efficient protection of stressed skin zones and for symptoms caused by pressure, friction and moisture. ilon Protect-Ointment protects stressed skin areas by forming a long-lasting protective film on the skin that does not soak in and thus reduces friction, for example between skin and clothing. Chafing, bedsores, sitting and pressure problems as well as moisture-related skin complaints (e.g. through urinary or faecal incontinence) can be prevented in this way.

Applications:

- **In sport and leisure**

  By people engaging in sports that are performed while seated, such as cycling, horse riding and rowing. Also by people who wear tight-fitting clothes during sports, such as joggers, triathletes, hikers, divers (neoprene).

- **In the care sector**

  For people in need of care whose skin is excessively stressed by lying or sitting on one side for too long, as well as for people who are dependent on a wheelchair. Also suitable as protection against moisture-related skin problems, for example caused by incontinence or as skin protection for diabetics. Typical accompanying factors here are dry skin, cracks in the skin and poor wound healing.

What are the benefits of ilon Protect-Ointment?

The natural ingredients contained in the product care for the skin, support blood circulation in the skin, contribute to the anti-inflammatory effect and can thus increase the skin's resistance. Redness and skin irritation can thus be prevented. The development of the innovative ilon Protect-Ointment is based on our over 90 years of experience with natural plant ingredients and their use in skin care.

The special ingredients:

- **Larch turpentine:** The natural product has already proven itself for decades as a circulation-stimulating, antibacterial and disinfecting agent.
- **Rosemary, eucalyptus and thyme oil:** These natural, essential and pleasantly scented oils have an activating and circulation-stimulating effect.
- **Olive oil:** A mild, protective and lipid-replenishing skin care oil that increases the skin's resistance and calms the skin.
- **Unique skin protection formula:** The ideal combination of high-quality petroleum jelly with beeswax forms a long-lasting, breathable protective film on the skin surface against friction, pressure and moisture.

Additional benefits:

- Skin tolerance dermatologically confirmed
- Free from preservatives
- Pleasantly fresh fragrance, transparent and highly efficient
- Easy to use
- Possible residues can be washed out of clothing

How is ilon Protect-Ointment used?

ilon Protect-Ointment should be applied thinly to stressed areas of the skin prior to exposure through sports, travel or illness-related lying or sitting.

Recommended application: A 2-3 cm long strand of ointment is usually sufficient. This allows discomfort due to sitting and pressure, chafing and bedsores to be prevented in advance or reduced.

Optimum application and storage at room temperature.

Please note: In general, ilon Protect-Ointment is well tolerated by the skin. In individual cases, people may react sensitively to the ingredients.
